"FLIGHT SYSTEM" - SPECTACLE DISPLAYS

* At last, a spectacle display system that angles eyewear to ideal vantage points. Frames that typically sell are in the limited space between 1000 – 1650mm high. Merchandise above or below these points does not stare appealingly at the patient. Our new FLIGHT SYSTEM overcomes this problem by allowing frames to be viewed for maximum impact from 750 – 1900mm, thereby increasing sales opportunities.

* The hinged bridge section of the frame holder (called the Shuttle) moves up and down in defined increments, allowing you to angle frames up if they are located at the bottom of the display (the "takeoff" position), or angle them down if they are at the top of the display (the "landing" position).

* The new frame holder is so versatile that it can even be used on horizontal surfaces sp that, in a glass case, the frames can be cleverly positioned to "stare" straight up at the viewer.

* The Shuttle is a durable is a durable component with a coating that provides a soft landing for your frames. It pops easily in and out of the Launch Pad – the moulded fitting that is inserted into a pre-machined panel. Contact our design department to discuss your panel layout and mounting options.
